

PATIENT: BLACKWELL, THEODORE R DOB: 09/14/1957 MRN: E4085221
STUDY DATE: 05/10/2026 SONOGRAPHER: R. Kim, RDCS READING PHYSICIAN: Anita Deshpande, MD

INDICATION

Heart failure with reduced ejection fraction; atrial fibrillation; surveillance during chemotherapy.

MEASUREMENTS

LVEF (biplane Simpson): 35%. LVIDd 5.9 cm. LA volume index 44 mL/m² (severely dilated). RVSP estimated 38 mmHg. TAPSE 1.7 cm.

FINDINGS

Left ventricle: Moderately dilated with moderately reduced systolic function, LVEF 35%. Global hypokinesis without regional wall motion abnormality. Global longitudinal strain -11% (reduced).

Left atrium: Severely dilated.

Mitral valve: Moderate functional mitral regurgitation.

Aortic valve: Trileaflet, mild sclerosis without stenosis.

Right ventricle: Normal size, low-normal function. Mild tricuspid regurgitation.

Pericardium: No effusion.

Rhythm during study: Atrial fibrillation, controlled ventricular response.

IMPRESSION

1. Moderately reduced LV systolic function, LVEF 35% (prior 38% on 11/2025) - continue cardio-oncology surveillance.
2. Moderate functional mitral regurgitation.
3. Severely dilated left atrium consistent with longstanding atrial fibrillation.
