

PATIENT: BLACKWELL, THEODORE R DOB: 09/14/1957 MRN: E4085221
DATE OF SERVICE: 06/02/2026 PROVIDER: Marcus Oyelaran, MD (Medical Oncology)

DIAGNOSIS

Stage III (pT3 pN1b M0) moderately differentiated adenocarcinoma of the sigmoid colon, status post laparoscopic sigmoid colectomy 03/25/2026, on adjuvant FOLFOX chemotherapy.

INTERVAL HISTORY

Presents for FOLFOX cycle 4 of planned 8. Tolerating chemotherapy with grade 1 fatigue and grade 1 cold-induced peripheral neuropathy in fingertips. No fevers, no diarrhea, no rectal bleeding. Appetite fair, weight stable. Cardiology co-managing HFrEF and atrial fibrillation; no anginal symptoms with oxaliplatin to date.

LABS (06/02/2026)

WBC 4.1, ANC 2100, Hgb 10.8, Plt 152. Creatinine 1.5 (baseline), eGFR 48. CEA 3.1 ng/mL (down from 8.4 pre-op). LFTs within normal limits.

ASSESSMENT AND PLAN

1. Stage III colon adenocarcinoma - proceed with FOLFOX cycle 4 today at full dose; continue neuropathy monitoring, consider oxaliplatin dose reduction if grade 2.
2. Port-a-cath functioning well, accessed without difficulty.
3. Neutropenia precautions reviewed. Patient instructed to present to the ED for fever ≥ 100.4 F given chemotherapy - flagged as high priority for any acute care team.
4. Anticoagulation (apixaban) continues per cardiology; hold threshold Plt $< 50k$.
5. Next: CEA q3 cycles; surveillance CT chest/abdomen/pelvis after cycle 8.
