

PATIENT: BLACKWELL, THEODORE R DOB: 09/14/1957 MRN: E4085221
ACCESSION: SP-26-08841 COLLECTED: 03/16/2026 REPORTED: 03/18/2026
PATHOLOGIST: Elena Vasquez, MD ORDERING: J. Whitfield, MD (Colorectal Surgery)

SPECIMEN

A. Sigmoid colon, biopsy (colonoscopy 03/16/2026, 28 cm from anal verge).

GROSS DESCRIPTION

Received in formalin, five fragments of tan-pink soft tissue measuring 0.2 to 0.5 cm in greatest dimension. Entirely submitted in one cassette.

MICROSCOPIC DESCRIPTION

Sections show colonic mucosa with an infiltrating glandular proliferation composed of atypical columnar cells with hyperchromatic, pseudostratified nuclei, forming irregular cribriform glands with central dirty necrosis. The proliferation invades through the muscularis mucosae into submucosa. Desmoplastic stromal reaction is present.

IMMUNOHISTOCHEMISTRY / ANCILLARY

Mismatch repair proteins: MLH1, MSH2, MSH6, PMS2 - INTACT nuclear expression (microsatellite stable). KRAS/NRAS/BRAF sent to reference lab, results to follow.

DIAGNOSIS

A. Sigmoid colon, biopsy: INVASIVE MODERATELY DIFFERENTIATED ADENOCARCINOMA arising in a tubulovillous adenoma. Lymphovascular invasion identified. Margins cannot be assessed on biopsy material.

Electronically signed: Elena Vasquez, MD – Department of Pathology
